RE: June 2023 Groundwater Sampling Report – Closed Sanitation, Inc. Landfill

Dear Mr. Spoja:

We have reviewed the report submitted by Hendrickson Consulting, LLC, on behalf of Barry Damschen Consulting, LLC, and it meets the requirements of the Administrative Rules of Montana, Title 17, chapter 50, subchapter 13.

Groundwater monitoring and sampling results for the June 2023 sampling event are consistent with previous reports. SIMW-2 and SIMW-3 detected VOCs, but were below the reporting limit and show no increasing trend in the future.

The facility remains in post-closure annual groundwater monitoring status. If you have any questions, please contact me.

Sincerely,

A handwritten signature in black ink that reads "Madeline Marchiafava". The signature is written in a cursive, flowing style.

LETTER DATED JANUARY 28, 2015

Dear Mr. Spoja:

Thank you for your letter dated January 28, 2015, expressing your concerns related to the frequency of the methane and groundwater monitoring. To clarify your concerns expressed in the letter; the post closure groundwater monitoring is conducted annually, while the post closure methane monitoring is conducted quarterly.

Therefore the facility remains in annual detection monitoring for groundwater and quarterly monitoring for methane at this time. If you have any further questions or comments regarding the post closure environmental monitoring requirements for the facility, please contact me.

**RE: CLOSED SANITATION, INC. LANDFILL – FERGUS COUNTY – LICENSE #291
JUNE 2013 GROUNDWATER SAMPLING REPORT**

Dear Mr. Spoja:

I have reviewed the June 2013 Groundwater Sampling Report for the closed Sanitation, Inc. Class II Landfill in Lewistown, Montana. The groundwater monitoring report meets the requirements of the Administrative Rules of Montana Title 17, Chapter 50, Subchapter 13.

I agree with the comment on the use of the new lower reporting limits for analysis of metals as outlined in MDEQ Circular DEQ-7. Since it has just been recently implemented at the site the use of the previous data, which had higher reporting limits, for statistical comparison would skew the June 2013 data. As more data is collected the statistical evidence for exceedances and trends in the data will be more useful in this analysis.

The facility remains in annual detection monitoring at this time. If you have any questions or comments regarding this review, please contact me.

**RE: CLOSED SANITATION, INC. LANDFILL – FERGUS COUNTY – LICENSE #291
JUNE 2012 GROUNDWATER SAMPLING REPORT**

Dear Mr. Spoja:

I have reviewed the June 2012 Groundwater Sampling Report for the closed Sanitation, Inc. Class II Landfill in Lewistown, Montana. The groundwater monitoring report meets the requirements of the Administrative Rules of Montana Title 17, Chapter 50, Subchapter 13.

The increasing trends in specific conductance and the increased detections of VOCs in groundwater samples during this sampling event are a concern. The concentrations of these VOC parameters should be closely monitored in future sampling events.

The facility remains in annual detection monitoring at this time. If you have any questions or comments regarding this review, please contact me.

Dear Mike,

Please find enclosed our copy of the groundwater results for the Spring 2019 sampling event at the Sanitation Inc. landfill. The samples were collected on June 9, 2019.

As indicated in the attached report, there does not appear to be any significant changes in the quality of the groundwater from the last sampling event. The VOC concentrations indicate no significant trends and in some cases, decreasing trends.

If you have any questions, please do not hesitate to call me or Mark Walker.

Very truly yours,

Dear John,

Please find enclosed our copy of the groundwater results for the Spring 2017 sampling event at the Sanitation Inc. landfill. The samples were collected on May 30, 2017.

As indicated in the attached report, there does not appear to be any significant changes in the quality of the groundwater from the last sampling event. The total number of reported VOC concentrations in May 2017 (7) was three lower than last year. The VOC concentrations were similar to those previously observed at the site.

If you have any questions, please do not hesitate to call me or Mark Walker.

Very truly yours,
BARRY DAMSCHEN CONSULTING, LLC
